Indirect restorative material choices include all-ceramic, porcelain-fused-to-metal, cast-gold and cast-metal. Indirect tooth restoration involves customized tooth replacements in the form of crowns, onlays, or inlays. A crown covers the entire chewing surface of a tooth, an inlay lies within the cusps of the tooth, and an onlay covers and one or more cusp tip, including part of the chewing surface. An indirect tooth restoration will require more than one office visit because the inlay or onlay must be fabricated in a lab. Crowns, inlays and onlays can be made from a variety of materials. Gold is still used for some inlays, but for someone concerned about white teeth, porcelain and tooth-colored composite resins are other options. In the future, China market is expected to witness significant growth on account of rising dental patients, so in the next few years, indirect restorative materials of dental consumables revenue will show a trend of steady growth. In 2025 the revenue of indirect restorative materials of dental consumables is estimated to be about 302 million USD. The China average price of indirect restorative materials of dental consumables is in the decreasing trend, from 8 USD/g in 2013 to 7.4 USD/g in 2017. With the situation of China economy, price will be in decreasing trend in the

following five years. The classification of all-ceramic, porcelain fused to metal and cast-gold alloys, and the proportion of all-ceramic in 2017 is about 56.5%. Indirect restorative materials of dental consumables are widely used in hospital, dental clinic and other. The most proportion of indirect restorative materials of dental consumables is used in dental clinic and the consumption proportion in 2017 about 63%. Market competition is not intense. 3M ESPE, Dentsply Sirona, Danaher, GC Corporation, etc. are the leaders of the industry, and they hold key technologies and patents, with high-end customers; have been formed in the monopoly position in the industry.
