The global Indoor Air Quality Monitor market was valued at 154.08 Million USD in 2021 and will grow with a CAGR of 6.69% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Indoor air quality (IAQ) is a term which refers to the air quality within and around buildings and structures, especially as it relates to the health and comfort of building occupants. IAQ can be affected by gases (including carbon monoxide, radon, volatile organic compounds), particulates, microbial contaminants (mold, bacteria), or any mass or energy stressor that can induce adverse health conditions. Source control, filtration and the use of ventilation to dilute contaminants are the primary methods for improving indoor air quality in most buildings. Residential units can further improve indoor air quality by routine cleaning of carpets and area rugs. Indoor Air Quality (IAQ) Monitor can measure CO, CO₂, temp, humidity; Calculates dew point, wet bulb temperature, or other parameters. In 2018, the global indoor air quality monitor market is expected to be dominated by North America. A number of factors such as the increasing adoption of new advanced indoor air quality monitoring technologies, ongoing technological advancements in the field of gas analyzers and particulate sensors, rising public-private funding and investments for promoting indoor and outdoor air pollution monitoring, and presence of supporting government regulations are driving the growth of the market in the North America. The market in APAC is expected to grow at the highest rate between

2018 and 2023. This market growth can be attributed to the large-scale industrialization, implementation of stringent air pollution regulations across major Asian countries, growing government emphasis on industry compliance with safety environment regulations, and continuous government support for the development and commercialization of advanced IAQM products.
