The global Industrial Boilers market was valued at 1184.4 Million USD in 2021 and will grow with a CAGR of 4.57% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A boiler is typically a closed vessel and has water stored inside it. In this heating system, a furnace is required to heat the boiler. Fuels such as coal are used to generate the heat. Subsequently, the heated air comes in contact with the vessel and convection takes place, heating the water inside the vessel. The heated water eventually produces steam. On the basis of type, the fire-tube segment dominated the market in 2017 and is also projected to grow at a higher rate than the water-tube segment owing to the compact design and efficient operation of fire-tube boilers.
