The global Industrial Burners market was valued at 910.92 Million USD in 2021 and will grow with a CAGR of 2.65% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact wwhich will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market verdors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

An Industrial burner is a mechanical device which uses gas or liquid fuel to produce flames in a controlled manner.The petrochemicals segment has been reporting a higher consumption of these burners compared to other end users. The scenario is likely to remain so over the next few years due to a robust rise in the demand for petrochemicals in developing regions, particularly in Asia Pacific. In 2016, North America dominated the global market for industrial burners with an overall contribution of 3.8 B USD in terms of revenue. Due to the various regulations introduced by governments across the world, it has become important for all manufacturers to produce energy efficient burners. Also, many manufacturers are now focusing on new technologies that will reduce the cost of production, apart from also reducing emissions from industrial furnaces. Industrial burners bring about complete combustion of the air and fuel which, in turn, reduces carbon dioxide emission. Many companies, in the steel industry specially, are now focusing on research and developments to produce energy efficient industrial burners. One of the major trends being seen in the industrial burner market is the use of renewable fuel oil. With increasing focus on reducing emissions so to avert negative changes in climatic condition, it has become important to use renewable fuel for
