Industrial dryers are used to reduce moisture efficiently from large quantities of bulk materials. The principle involved in drying is the drawing of moisture from the interior of individual particles to the surface. This moisture on the surface is then evaporated. Industrial dryers are constructed depending on the type and quantity of material to be processed. The direct dryers segment accounted for the largest share of the industrial dryers market in 2017 owing to the steep increase in their usage across several industries owing to their simple functionality and efficiency.
