A dust collector is a system used to enhance the quality of air released from industrial and commercial processes by collecting dust and other impurities from air or gas. Designed to handle high-volume dust loads, a dust collector system consists of a blower, dust filter, a filter-cleaning system, and a dust receptacle or dust removal system. It is distinguished from air cleaners, which use disposable filters to remove dust. The growth of global industrial dust collector market can majorly be attributed to the increased industrial manufacturing and infrastructure development resulting in growth of economic activity across the globe. Also, growth in coal capacities especially in Asia-Pacific region, due to its reliability during peak power demand, is expected to boost the market growth.
