Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Enzymes are protein molecules functioning as specialized catalysts for chemical reactions. They have contributed greatly to the traditional and modern chemical industry by improving existing processes. Enzymes are natural catalysts. They are produced by living organisms to increase the rate of an immense and diverse set of chemical reactions required for life. They are involved in all processes essential for life such as DNA replication and transcription, protein synthesis, metabolism and signal transduction, etc. And their ability to perform very specific chemical transformations has made them increasingly useful in industrial processes. Nearly 65% (2019) of the total enzymes are produced by three top enzyme companies, i.e. Denmark-based Novozymes, US-based DuPont and DSM. The market is highly competitive, has big profit margins and is technologically intensive. Industrial enzymes downstream are wide and recently industrial enzymes have acquired increasing significance in various fields of food and beverage, detergents, animal feed, textile and others. Globally, the industrial enzymes market is mainly driven by growing demand for health food; health beverage and bioenergy. In APAC market food and beverage hold nearly 49% of total Europe downstream consumption of industrial enzymes in 2019. Industrial Enzymes

include carbohydrase, protease, lipases, amylase and others.
