Abstracts

The global Industrial Gas Generator market was valued at 1869.96 Million USD in 2021 and will grow with a CAGR of 10.05% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

In this report, the generator discussed mainly stands for gas generator set for industrial applications, which includes three parts: gas engine, generator and control cabinet. It is a new type of green environmentally-friendly power instead of fuel oil and coal units. Gas Engine is an internal combustion engine which runs on a gas fuel, such as coal gas, producer gas, biogas, landfill gas or natural gas. Generators are devices that convert mechanical energy into electric energy. The need for an uninterrupted power supply during power outage caused by natural calamities or faults in electric networks has boosted the adoption of gas generators in the industrial sector.
