The global Industrial Gases market was valued at 611 Million USD in 2021 and will grow with a CAGR of 1.97% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Industrial gas is a generic term for gases (liquefied gases) used widely in all industries for raw materials and intermediate materials in the manufacturing industry, or for quality improvement, energy saving and the safety in manufacturing processes. This does not include city gas (coal gas for domestic use) and LP gas that are mainly used for household energy. Medical gases used in hospitals are included among industrial gases. Industrial gases are used in a variety of purity grades and for a wide range of purposes, including food gases and medical gases. Industrial gases can make production processes safer and more cost-effective and improve product quality. They often contribute to environmental protection. Some processes and applications would even be inconceivable without the chemical properties of gases. Typical user sectors include the automotive industry, the steel industry, environmental engineering, food and beverages, construction, metallurgy, glass and ceramics, medicine and pharmaceuticals, the chemical industry, and research and development. The global industrial gases market is highly concentrated as it is mainly dominated by four giants, Linde Group, Air Liquide, Praxair, Air Products and Chemicals. However, there is news revealing that Praxair is negotiating with Linde about the merger. Once the merger is

implemented, the market will become more and more concentrated.
