Margarine is a substitute for butter, prepared from vegetable and animal fats by emulsifying them with water and adding small amount of milk, salt, vitamins, colouring matter, etc. Industrial Margarine is an all-purpose margarine suitable for industrial uses related to baking. North America accounted for the largest market share of the industrial margarine market in 2017. This market is driven by the health-conscious consumers due to the growing incidences of diseases such as diabetes, high-blood pressure, and constipation that has been fueling the market for margarine. The food manufacturers in the US are therefore concentrating on producing margarine products that do not contain any trans-fat.
