## Abstracts

The global Industrial Radiography Equipment market was valued at 454.44 Million USD in 2021 and will grow with a CAGR of 4.97% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Radiography is an imaging technology that uses gamma rays and X-rays to penetrate an object. The image generated helps to identify deformities or defects, which are not visible to the naked eye. The object under purview is exposed to radiation waves, and a film or a digital detector is used to capture an image of the object. This image assists the end-user (industry) to identify defects, if any, on the object; darker areas on the image indicate high levels of radiation, whereas lighter areas indicate low levels radiation. The Americas held the largest share of market followed by Europe and APAC in 2017. The market in APAC is expected to grow at the highest rate during the forecast period. The Rest of World which includes the Middle East and Africa holds a small market share at present; however, it is expected to grow during the forecast period due to the increasing demand for industrial radiography services in this region.
