Abstracts

The global Industrial Semiconductors market was valued at 45.44 Million USD in 2021 and will grow with a CAGR of 12.37% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A semiconductor material has an electrical conductivity value falling between that of a conductor - such as copper, gold etc. - and an insulator, such as glass. The industrial semiconductors are all used in industrial application. Many industries, from construction to healthcare, could adopt AI technology to improve efficiency and reduce costs. That could boost the earnings of Intel (INTC), Nvidia (NVDA), and Cypress Semiconductor (CY). The shift to a 10 nm (nanometer) node by Intel, which could put it back in a technological advantage. Taiwan Semiconductor Manufacturing (TSM) and Samsung could also shift to a 7 nm node, but that would be equivalent to Intel's 10 nm node. The move to a smaller node could bring significant cost savings and improve the performance of the chips. The another development for the semiconductor industry is the onset of level-three autonomous vehicles on the road. Google's (GOOG) Waymo plans to commercially launch its autonomous ride-sharing service as early as 2018. Nvidia expects its Drive PX 2 platforms that deliver level-three autonomy to power some models of Tesla (TSLA) and Toyota (TM). There could be some strong growth in Intel's and Nvidia's automotive revenue in 2018.
