An industrial shredder is a machine used for reducing the size of all kinds of material. Industrial shredders come in many different design variations and many sizes. Some examples of materials that are commonly shredded are: tires, metals, car wrecks, wood, plastics, and garbage. There is no common use of an industrial shredder as they can shred paper as well as wood, plastic, metal including a whole car depending on the size and design of the industrial shredder. The industrial shredder is commonly used to process materials into different sizes for separation or to reduce the recycling cost of transport but a primary use is the upgrading of the material by shredding metals, plastics, aluminium, metal and cars and as well as waste materials such as municipal solid waste or nuclear waste, medical waste, hazardous waste including common garbage. The global average price of industrial shredder is stable from 2012 to 2016. With the situation of global economy, prices will be in slowly decreasing trend in the following five years. The classification of industrial shredder includes Single Shaft Industrial Shredder, Two Shaft Industrial Shredder and Four Shaft Industrial Shredder, and the proportion of Single Shaft Industrial Shredder in 2016 is about 49%.
