Uninterrupted Power Supply (UPS) is an electrical System that provides emergency power to a load when the input power source fails. UPS systems provide a measure of insurance and security for the user who is concerned about data loss and hardware failures caused by power disturbances. A UPS differs from an auxiliary or emergency power system or standby generator in that it will provide near-instantaneous protection from input power interruptions, by supplying energy stored in batteries, supercapacitors, or flywheels. An industrial UPS is an electrical appliance used to provide power backup to a load during a power breakdown. These industrial UPS provide instantaneous power backup by ensuring continuous power supply from energy stored in batteries. Industrial UPS are widely deployed for continuous power supply in various industries such as the petroleum industry, chemical industry and electric power industry. EATON, Emerson and Schneider-Electric, captured the top three revenue share spots in the Industrial UPS market in 2015. EATON dominated with 19.36% revenue share, followed by Emerson with 18.61% revenue share and Schneider-Electric with 18.38% revenue share. In the next five years, the global consumption of Industrial UPS will show upward tendency further, consumption is expected in 2021 will be 158149 Units. Applications of

the Industrial UPS are concentrated on Petroleum Industry, Chemical Industry, Electric Power Industry, with total 83.45 percent market share in 2015. In term of the classifications segment, products AC Industrial UPS are the most output and the production market share in 2015 is 64.09%, but the growth rate is getting lower.
