Abstracts

The global Industrial Videoscope market was valued at 2473.91 Million USD in 2021 and will grow with a CAGR of 12.93% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A videoscope is a flexible inspection instrument that consists of a flexible insertion tube with a video display at one end and an objective lens at the other. The image is produced using a CCD camera chip 1/10th inch or smaller in diameter. The image is relayed from the inspection area to the video display electronically. An internal fiber optic light guide, or LED lighting at the objective, is used to illuminate the area being inspected. Industrial videoscopes are used for inspection of areas that are difficult or impossible to view without dis assembly or destruction of the item to be inspected. The United States leads in Industrial Videoscope Industry The United States leads in Industrial Videoscope spend. Large gains in Aerospace spend in China, with 15% growth year-over-year, respectively, were a key driver of the growth in Transport and automotive technology. China are high-growth markets, due to increasing Building and construction industry and automotive industry Russia`s huge growth opportunities As the continued development of Russia`s oil and chemical industry, Russia provides Industrial Videoscope companies with strong growth opportunities for future growth. The average price will fall further The product average price declined in the past few years due to the technology development, the average price will keep this trend in the few

future years due to increasing mature manufacturing technology and lowering cost of raw materials. Strong market competition is resulting in annual 2 percent price erosion. Technology development trend Improved Measurement Capabilities Certain applications require a videoscope that can make accurate measurements. True stereo measurement provides depth, area, distance, and point-to-line measurements. The involved technique of one-to-one matching, where an optical tip adaptor is paired with a single scope on a specialized jig, has expanded the capabilities of stereo measurement and increased precision. Previously, stereo measurement required operators to position the distal end of the insertion tube very close to the crack or defect. Now, stereo measurement can be performed from twice the distance as was possible with previous-generation videoscopes, covering an inspection area four times larger. This means that a 1.5-inch flaw can be measured from one inch away. Operators can expect to spend less time navigating and positioning the distal end for a stereo measurement. Features that Support Evaluation Features that support an inspector's work are available to help get answers. Simple videoscopes that only record images are popular, but mid-range and high-end videoscopes have clever features that aid operators in evaluating flaws. Operators can compare a saved image taken from a previous inspection to a live image on a split screen. The saved image can even be overlaid on a live image at the desired opacity to help inspectors recognize changes, such as a new nick or the lengthening of a crack. These image comparison features enable the operator to quickly evaluate the condition of equipment in the field. Text and symbol annotations on images, notes, and voice memos are all features designed to increase the efficiency of an inspector's workflow. Prompts for filing and naming the saved images help operators stay organized after the inspection. Images and notes can be streamlined into customizable reports, drastically cutting down on the time needed to create a report and reducing the amount of time an inspector spends recounting observations. Form Factor The design and form factor of videoscopes are increasingly focused on operator comfort. Videoscopes are used in a wide range of environments from the gear boxes in wind turbines to underground pipelines. To accommodate these diverse and sometimes challenging workspaces, videoscopes are manufactured in numerous shapes and sizes. Some are lightweight and designed for single-handed operation for maximum portability. When portability is crucial, videoscopes tend to have smaller screens and compact bodies with simpler operating systems. Some are built to military standards and are fully outfitted with interchangeable insertion tubes. Videoscopes are available with touch screens, remote controls, and detachable monitors. Some videoscopes can easily mount to a tabletop or workstation. In addition, a growing trend is integrating the carrying case so that it can be used as a stand for the videoscope. Whatever the inspection environment, there is a videoscope designed to best suit the operator, rather than having the operator struggle to accommodate the

equipment. Connectivity Inspection images must often be reviewed by a team member offsite. As demand for connectivity is growing, videoscopes offer solutions, such as integrated Wi-Fi, for image sharing and even live streaming. While equipment is being inspected in the field, a team member in the office or at another field location can have a virtual presence by viewing and providing feedback on the live inspection with a desktop, tablet, or smartphone. Features that support collaboration and teamwork are growing as more organizations want to quickly share inspections for review.

Key Indicators Analysed

Market Players & Competitor Analysis: The report covers the key players of the industry including Company Profile, Product Specifications, Production Capacity/Sales, Revenue, Price and Gross Margin 2016-2027 & Sales with a thorough analysis of the market's competitive landscape and detailed information on vendors and comprehensive details of factors that will challenge the growth of major market vendors.

Global and Regional Market Analysis: The report includes Global & Regional market status and outlook 2016-2027. Further the report provides break down details about each region & countries covered in the report. Identifying its sales, sales volume & revenue forecast. With detailed analysis by types and applications.

Market Trends: Market key trends which include Increased Competition and Continuous Innovations.

Opportunities and Drivers: Identifying the Growing Demands and New Technology

Porters Five Force Analysis: The report provides with the state of competition in industry depending on five basic forces: threat of new entrants, bargaining power of suppliers, bargaining power of buyers, threat of substitute products or services, and existing industry rivalry.

Key Reasons to Purchase

To gain insightful analyses of the market and have comprehensive understanding of the

global market and its commercial landscape.

Assess the production processes, major issues, and solutions to mitigate the development risk.

To understand the most affecting driving and restraining forces in the market and its impact in the global market.

Learn about the market strategies that are being adopted by leading respective organizations.

To understand the future outlook and prospects for the market.

Besides the standard structure reports, we also provide custom research according to specific requirements

1 REPORT OVERVIEW

- 1.1 Study Scope
- 1.2 Key Market Segments
- 1.3 Players Covered: Ranking by Industrial Videoscope Revenue
- 1.4 Market Analysis by Type
 - 1.4.1 Global Industrial Videoscope Market Size Growth Rate by Type: 2021 VS 2027
 - 1.4.2 Hand Held Type
 - 1.4.3 Desktop Type
- 1.5 Market by Application
 - 1.5.1 Global Industrial Videoscope Market Share by Application: 2022-2027
 - 1.5.2 Aerospace
 - 1.5.3 Power Engineering And Power Plants
 - 1.5.4 Transport And Automotive Technology
 - 1.5.5 Pipelines, Chemistry, And Plant Engineering
 - 1.5.6 Building And Construction Industry
 - 1.5.7 Research, Development, And Customized Solutions
- 1.6 Study Objectives
- 1.7 Years Considered
- 1.8 Overview of Global Industrial Videoscope Market
 - 1.8.1 Global Industrial Videoscope Market Status and Outlook (2016-2027)
 - 1.8.2 North America
 - 1.8.3 East Asia
 - 1.8.4 Europe
 - 1.8.5 South Asia
 - 1.8.6 Southeast Asia
