## Abstracts

The global Inertial Navigation System (INS) market was valued at 9151.95 Million USD in 2021 and will grow with a CAGR of 4.12% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

An inertial navigation system (INS) is a navigation aid that uses a computer, motion sensors (accelerometers), rotation sensors (gyroscopes), and occasionally magnetic sensors (magnetometers) to continuously calculate by dead reckoning the position, the orientation, and the velocity (direction and speed of movement) of a moving object without the need for external references. It is used on vehicles such as ships, aircraft, submarines, guided missiles, and spacecraft. North America is estimated to lead the global INS market in 2018. The US has a major market share in missiles along with a most profitable aviation industry, thus North America is expected to fuel the growth of the market. Major aircraft manufacturers present in North America are Boeing (US), Bombardier (Canada), Lockheed Martin (US), Bell Helicopter (US), and Sikorsky Aircraft (US), and therefore generate a high demand for the inertial navigation system. North America is expected to continue to lead the market during the forecast period.
