Ingestible sensors is an innovative technologically advanced product of digital medical industry. Ingestible Sensors are pills that have the ability to detect various bodily functions and activities, medication check, heart rate and blood pressure. North America currently dominates the ingestible sensors market. As treatment procedures using ingestible electronic pills are highly effective and minimally invasive, physicians prefer the use of ingestible sensor technology. In North America, the field of endoscopy has witnessed significant technological advancements over the past few years such as the development of advanced wireless minimally invasive capsule endoscopes. The Asian market is characterized by the presence of a large population base and high incidence of target diseases. In the APAC ingestible sensors market, established players from various product segments are following the push strategy, which enables them to make their ingestible electronic pills available in this region. Japan, China, and India represent the next promising hubs for the development of ingestible sensors technology-based devices.
