The global Insect Pest Control market was valued at 1782.6 Million USD in 2021 and will grow with a CAGR of 3.96% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Insect pest control is the regulation or management of a species defined as a pest, a member of the animal kingdom that impacts adversely on human activities. The human response depends on the importance of the damage done, and will range from tolerance, through deterrence and management, to attempts to completely eradicate the pest. Pest control measures may be performed as part of an integrated pest management strategy. The chemical control method was largely used for insect pest control in 2017 due to the significant demand for pyrethroids for its limited application rate and compatibility against a variety of insects. Termite control, on the basis of insect type, accounted for the largest share in 2017 owing to its higher demand in industrial and residential sectors for pre- & post-construction treatment and wooden house treatment, respectively.
