An insect pheromone is a secreted or excreted chemical factor that triggers a social response in members of the same species. Pheromones are chemicals capable of acting like hormones outside the body of the secreting individual, to impact the behaviour of the receiving individuals. There are alarm pheromones, food trail pheromones, sex pheromones, and many others that affect behaviour or physiology. Pheromones are used from basic unicellular prokaryotes to complex multicellular eukaryotes. The global Insect Pheromones market is significantly large in Europe and North America, majorly due to increasing products demand. Currently, China is dominating the market in terms of volume. Moreover, Asia Pacific is expected to be the fastest growing segment. The key factors attributed to the demand for sustainable and innovative Insect Pheromones in emerging economies, such as China and India among others.
