Instant coffee, also called soluble coffee, coffee crystals, and coffee powder, is a beverage derived from brewed coffee beans that enables people to quickly prepare hot coffee by adding hot water to the powder or crystals and stirring. Instant coffee is commercially prepared by either freeze-drying or spray drying, after which it can be rehydrated. Instant coffee in a concentrated liquid form is also manufactured. Geographically, the global market for instant coffee has been categorized into Latin America, North America, Asia Pacific, the Middle East and Africa, Western Europe, and the Rest of the Europe. With a share of 35.2%, Asia Pacific dominated the overall market in 2017 and is expected to remain on top over the next few years. The rising interest of consumers for instant coffee in China and India has been driving the market for instant coffee in Asia Pacific. Although tea is culturally more significant in this region, the easy preparation method of instant coffee is stimulating its uptake here, aiding the market extensively.
