Insulated paints is a type of paint that blocks the transfer of heat through walls and reduces unwanted radiant heat loss and heat gain into a structure. Insulating paints can reflect or block heat from all sources such as heaters, fireplaces, radiators, and sunlight inside a building. These paints can either be applied to the interior wall or can be mixed with an additive on an existing paint. These paints are water based, and thus are non-toxic and environment friendly. They offer high thermal coefficient and low thermal conductivity preventing insulation and reflecting the infrared rays. Rise in investments related to construction, such as commercial and industrial buildings, and growth in need to minimize energy costs related to residential and commercial buildings drives the market growth. Further, increase in number of construction projects is expected to provide substantial growth opportunity to the industry players.
