## Abstracts

The global Intelligent Gas Meter market was valued at 2274.97 Million USD in 2021 and will grow with a CAGR of 1.59% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Intelligent Gas Meter is a new type measuring instrument, adopting microcomputer program control, automatic compensation of ball valve, other high technology, integrates measuring, prepayment, automatic control and other functions, which can be widely used in measuring control for manufactured gas, natural gas, liquefied gas and other various pipe gases. The main technical and economic advantages of natural gas are to promote the development of smart gas meters. Diaphragm gas meters are the most common type, and the market share of turbo gas meters and ultrasonic gas meters is similar. Rotating piston and thermal mass flow are minimal. Smart gas meters are mainly used in residential areas, where demand in developed regions is greater, and demand in each region will continue to grow. Commercial and industrial applications require far less demand for smart gas meters. The smart gas meter industry is not a relatively concentrated market. Europe is the largest market in the world. The number of the United States exceeded that of China in 2011, but China has been accelerating the replacement of old gas meters, so the market share between the United States and China is not much different.
