The global Intelligent Motor Controller market was valued at 610.31 Million USD in 2021 and will grow with a CAGR of 4.26% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Intelligent motor controller is the next technology in motor control centers. Motor control centers (MCC) are used to carry out functions such as power switching, short-circuit protection, and overload protection, local and remote actuation, and controller state indication in an industrial or manufacturing plant. As an extension of this Intelligent motor controller can be defined as motor control centers that integrate three major system components of network communication: communications, hardware, and software. In other words, intelligent motor controller provides an equivalent or greater functionality as compared to traditional MCCs at an economical cost, thereby maximizing the value of components in the plant. Europe led the market for intelligent motor controller in 2017, owing to higher adoption of smart devices in the region. Industries in North America are currently focusing on developing existing infrastructure and are adopting smart motor control devices for better control and higher energy savings. The U.S. is expected to be the fastest growing market in the North American region from 2018 to 2025.
