## Abstracts

The global Interactive Robots market was valued at 368.13 Million USD in 2021 and will grow with a CAGR of 55.88% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

An interactive robot is an autonomous robot that interacts and communicates with humans or other autonomous physical agents by following social behaviors and rules attached to its role. Like other robots, a social robot is physically embodied. Some synthetic social agents are designed with a screen to represent the head or `face` to dynamically communicate with users. The increasingly widespread use of more advanced social robots is one of several phenomena expected to contribute to the technological posthumanization of human societies, through which process a society comes to include members other than `natural` biological human beings who, in one way or another, contribute to the structures, dynamics, or meaning of the society.?
