The Interceptor Missile is an anti- ballistic missile designed to counter the ballistic missile like intermediate range and intercontinental ballistic missiles launched from any country. In three ways an Interceptor Missile works: a 'hit-to-kill' device i.e. at an incredibly high speed, an interceptor runs into the incoming projectile, it contains a device that is warhead with a directed fragmentation explosive and combination of both as mentioned. For example the AEGIS BMD is a pure 'hit-to-kill' an Israeli Arrow missile which uses an explosive warhead while the modern Patriot missiles use a 'hit-to-kill' vehicle with a small explosive warhead to amplify the damage.
