The global Internal Mould Release Agent (IMR) market was valued at 50.7 Million USD in 2021 and will grow with a CAGR of 3.59% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Internal Mould Release (IMR) Agent is a product that is dissolved in the resin mix, which is highly soluble in the carrier solvent i.e. styrene. During cure the product drops out of solution and migrates to the surface due to volumetric shrinkage, pressure and temperature. Internal release agents are directly added to the composite material being molded during mixing to provide integrated release properties. Global Internal Mould Release Agent (IMR) key players include Chem-Trend, AXEL, Chukyo, Yushi, Marbocote, Franklynn Industries, etc. Global top five manufacturers hold a share over 25%. Asia Pacific is the largest market, with a share about 40%, followed by Europe, and North America, both have a share over 45 percent. In terms of product, Solvent-based is the largest segment, with a share over 75%. And in terms of application, the largest application is Rubbers, followed by Thermosetting Resin, etc.
