Intravenous solutions contain amino acids, dextrose, mineral salts, vitamins, and trace elements, and therefore cover the basic essential components (carbohydrates, proteins, fats, water, electrolytes, vitamins, and minerals) required to build tissue, for energy expenditure, and other physiological activities. A complete mixture of all vital nutrients is also available in multi-chamber bags, which are gaining immense popularity. Intravenous Fluid Bags are widely used in hospitals, nursing homes and at-home healthcare, also other related health centers. Among which hospitals occupied almost half of total market share, at-home healthcare occupied about 18% market share, and developed countries contribute a lot in this field. There are more changes as the calendar changes to next few years. Government compliance, new integrated strategies and incentive programs all figure to play a major role in this developing market, where change seems to be the only constant.
