## Abstracts

The global Ion Exchange Resins market was valued at 277.09 Million USD in 2021 and will grow with a CAGR of 5.87% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Ion-exchange Resin is an insoluble matrix (or support structure) normally in the form of small beads (0.5-1 mm diameter), usually whitish or yellowish, fabricated from an organic polymer substrate. The beads are typically porous, providing a high surface area. The trapping of ions occurs with concomitant releasing of other ions; thus the process is called ion-exchange. There are multiple types of ion-exchange resin. Most commercial resins are made of polystyrene sulfonate. With ion exchange resin production increasing in China and Asia regions. the low-end ion exchange resin products supply has exceeded demand already. There are still many companies considering entering this market. But the high-end market is still dominated by the top four companies. Therefore, the Chinese ion exchange resin market will be more dispersed. Especially in the low-end product market. The ion exchange resins market in the APAC region possesses immense potential for growth. Increasing demand for water treatment and the growing urbanization and increasing affluence in the region are expected to fuel the demand for ion exchange resins during the forecast period. China, India, Japan, and South Korea are some of the key countries in the region contributing significantly towards the growth of the ion exchange resins market in the APAC region.
