The global IP Cameras market was valued at 993.4 Million USD in 2021 and will grow with a CAGR of 13.67% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Internet protocol camera, or IP Cameras, is a type of digital video camera commonly employed for surveillance, and which, unlike analog closed circuit television (CCTV) cameras, can send and receive data via a computer network and the Internet. Although most cameras that do this are webcams, the term 'IP Cameras' or 'netcam' is usually applied only to those used for surveillance. The first centralized IP Cameras was Axis Neteye 200, released in 1996 by Axis Communications. Currently, IP Cameras is widely accepted in developed markets and the adoption rate is expected to increase in developing markets such as Asia-Pacific. Increasing exposure to Internet Protocol along with 3G and 4G networks will further increase use of mobile platforms in most of the sectors especially in the surveillance systems. The other crucial drivers for this market are real-time access, video analytics, technological innovations, integration of wireless technologies, and affordability of surveillance, government initiatives and security concern. However, factors like lack of awareness and privacy concerns are lowering the adoption of IP Cameras. Lower technological awareness among the population and uncertainty in the government regulations is hindering market growth rate to a certain extent. The IP Cameras market is fragmented in nature, as various components are

manufactured by different manufacturers. This decreases the bargaining power of supplier, as cost switching is possible among the consumers. Moreover, technological innovation can be considered as a principal strategy to increase bargaining power of suppliers. Competitive rivalry among market players is observed to be very high mainly due to large number of small to medium players competing with each other in order to increase its market share and relevance.
