This report studies the Iron Chelation Drug market. The rationale behind using Iron chelation therapy is removing the increased iron burden specifically labile cell iron (LCI) to minimize production of reactive oxygen species (ROS) thereby decreasing cellular and organ damage. Patients most likely to benefit from chelation therapy include those with low or intermediate-1 IPSS risk MDS who have a long-life expectancy and are anticipated to receive more than 20 red blood cell transfusions and/or whose serum ferritin level is >1000 µg/L. Chelation therapy efficacy can be monitored by monitoring trends and levels of serum ferritin. North America is the largest consumption region of Iron Chelation Drug, with a consumption value market share nearly 31.03% in 2016. Europe is the second largest consumption region of Iron Chelation Drug, enjoying consumption value market share nearly 25.30% in 2016. Apotex, Cipla and other company are the leaders of the industry, and they hold key technologies and patents, with high-end customers; have been formed in the monopoly position in the industry.
