A flow battery, or redox flow battery (after reduction-oxidation), is a type of electrochemical cell where chemical energy is provided by two chemical components dissolved in liquids contained within the system and separated by a membrane. Ion exchange (accompanied by flow of electric current) occurs through the membrane while both liquids circulate in their own respective space. Cell voltage is chemically determined by the Nernst equation and ranges, in practical applications, from 1.0 to 2.2 volts. Iron Flow Battery is a type of flow battery, its anode is made of iron materials, cathode is made of ferro-ferricyanide aqueous couple or ferric chloride solution etc. North America is the largest consumption place, with a consumption market share about 50% in 2019. Following North America, Asia-Pacific is the second largest consumption place with the more than 20% consumption market share. ESS Inc and Electric Fuel Energy (EFE) are industry leaders. The classification of Iron Flow Battery includes All Iron-based Flow Battery and Iron Hybrid Flow Battery. The proportion of All Iron-based Flow Battery in 2019 is about 85%. Iron Flow Battery is widely used for Utility Facilities, Renewable Energy Storage and Others. The most proportion of Iron Flow Battery is used for Utility Facilities, and the proportion in 2019 is over 1/2 market shares.
