The global Isobutene market was valued at 456.72 Million USD in 2021 and will grow with a CAGR of 4.68% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Isobutene is a hydrocarbon of industrial significance. It is a four-carbon branched alkene (olefin), one of the four isomers of butylene. At standard temperature and pressure it is a colorless flammable gas. The classification of Isobutene includes MTBE Cracking, Tert-butanol (TBA), and the proportion of MTBE Cracking in 2017 is about 73.9%. However, growing concerns regarding groundwater contamination caused due to leakage of MTBE coupled with increasing popularity of ethanol as a gasoline blending agent is expected to segment impact growth negatively. Isobutene is widely used in Butyl Rubber, MMA, PIB and other. The most proportion of Isobutene is used in Butyl Rubber, and the consumption proportion is about 54.2% in 2017. North America is the largest supplier of Isobutene, with a production market share 42%. The second place is Europe, following North America with the production market share of 31%.
