Isononyl alcohol (INA) is a flammable and colorless liquid used as an intermediate for making a variety of other chemicals which are used in many applications. It is primarily used in chemical reaction processes. It is not sold directly to the public for general consumer uses; however this product may be an ingredient in consumer and commercial applications such as plasticizers, stabilizers, and lubricants. INA is produced by processing hydroformalation, hydrogenation, distillation and refinement from octenes that is formed by the dimerization of butanes. In the world wide, giant manufactures mainly distribute in USA and Europe, like ExxonMobil (USA) and Evonik (Germany), both have perfect products. These two companies approximately hold 65% of global production market share in 2015.
