Abstracts

The global Isoprene Rubber (IR) market was valued at 120.83 Million USD in 2021 and will grow with a CAGR of 3.48% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Isoprene rubber (IR) is a polymer of synthetic isoprene. It combines the key qualities of natural rubber such as good mechanical properties and hysteresis with superior features such as high purity, excellent clarity, good flow, low gel content, no nitrosamines, and no natural rubber proteins. The IR products are widely used in tire, medical products, conveyor belts and others. In addition, polyisoprene elastomer is equivalent to isoprene rubber (IR). In consumption regions, the growth rate of global consumption is smooth relatively. Russia is still the mainly consumption regions due to the advanced production technology and rapid development of economy. The isoprene rubber industry is easily affected by the price of the natural rubber crude oil and natural gas. The natural rubber is an alternative of IR products, with the same price trends in the past few years. The price of natural rubber changed intensely since 2013, which lead to the fluctuation of IR price. The major raw material for isoprene rubber is isoprene monomer. On the global market, supply of raw materials is full. Fluctuations in the price of the upstream product will impact on the production cost of isoprene rubber industry. We tend to believe this industry is a rising industry, and the consumption increasing degree will show a smooth growth curve. And the price presents fluctuation according to

the economy development status and international competition. Also, there is fluctuation in gross margin.
