The global Isothermal Nucleic Acid Amplification market was valued at 392.99 Million USD in 2021 and will grow with a CAGR of 9.82% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Isothermal nucleic acid amplification is referred to isothermal nucleic acid amplification technology. And in this report, we get the statistics on reagents used in isothermal nucleic acid amplification technology. Nucleic acid isothermal amplification is a newer technique that amplifies DNA or RNA specific fragment from few copies to billion-fold copies under a one temperature condition, unlike PCR amplification that needs at least 30-35 thermal cycles to accomplish the reaction. Currently, some companies in the world can produce isothermal nucleic acid amplification product, mainly concentrating in North America and Europe. The main market players are PreAnalytiX, Meridian Bioscience, Eiken Chemical, Lucigen, OptiGene, etc.
