Abstracts

The global Keyhole Limpet Hemocyanin (KLH) market was valued at 8.95 Million USD in 2021 and will grow with a CAGR of 2.1% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

This report studies the Keyhole Limpet Hemocyanin (KLH) market, KLH, which can be used as an active pharmaceutical ingredient (?API?), is a very large, high molecular weight, oxygen-carrying glycoprotein made of millions of atoms. There are two KLH subunit forms, KLH1 and KLH2, each composed of seven or eight functional units, with each functional unit having an oxygen binding site of two copper atoms. Keyhole limpet hemocyanin is an extremely large, heterogeneous glycosylated protein consisting of subunits with a molecular weight of 350,000 and 390,000 in aggregates with molecular weights of 4,500,000-13,000,000. Each domain of a KLH subunit contains two copper atoms that together bind a single oxygen molecule (O₂). The KLH protein is potentially immunogenic yet safe in humans and is therefore highly prized as a vaccine carrier protein. KLH protein is derived only from the hemolymph of the giant keyhole limpet (*Megathura crenulata*), which is native only to a limited stretch of the Pacific Ocean coastline along Southern California and Baja California, Mexico. KLH can be used as an active pharmaceutical ingredient and has high medical value. Due to high technology barrier and scarce raw material, there are few companies able to produce KLH and biosyn highly monopolizes the market at the moment.
