L-arginine is a type of  $\alpha$ -amino acid. The L-form is one of the 20 most common natural amino acids. A nonessential amino acid in human, L-Arginine is a substrate of nitric oxide synthase, which is converted to L-citrulline and nitric oxide (NO). It is widely used as an ingredient in dietary supplements, infusions and infant formulas. Major factors driving growth of this market include the application of biological fermentation technology, which enabled the production of arginine improved a lot, rising care awareness and increasing disposable income in emerging economies, However, high cost of instruments, lack of production technology especially in emerging economies, and lack of laboratory technicians are expected to restrain the growth of this market. The L-Arginine industry concentration is not high; there are more than one hundreds manufacturers in the world, and high-end products mainly from Eastern Asia and Western European. Global giant manufactures mainly distributed in Eastern Asia and E.U. The manufacturers in Japan have a long history and unshakable status in this field. Manufacturers such as Ajinomoto & KYOWA have relative higher level of product's quality. In Germany, EVONIK leads the technology development. Most of Chinese manufactures locate in Hebei, Shandong and Zhejiang province. Many companies have

several plants, usually locate in the place close to aimed consumption region. There are international companies set up factories in China either, such as CJ whose plant is located at Shandong province.
