Lysine is an α -amino acid with the chemical formula $\text{HO}_2\text{CCH}(\text{NH}_2)(\text{CH}_2)_4\text{NH}_2$. It is an essential amino acid for humans. L-Lysine is the most important amino acid for monogastric species, as it is the first limiting amino acid for pigs and the second limiting amino acid for poultry. The L-Lysine industry concentration is high. Global giant manufactures mainly distributed in Korea, China, USA and Germany. Many companies have several plants, usually locate in the place close to raw material and aimed consumption region. There are international companies set up factories in China either. China is the No.1 play in this industry and takes a market share of 62% in 2016, followed by North America. On the key consumption markets, China takes the market share of 37%, followed by Europe with 26% in 2016. The price is affected by the raw material and supply, in these years, L-Lysine suffer a huge price fluctuation, mostly due to the overcapacity. So, reducing capacity has been the industry characteristics in recent years.
