The global L-Valine market was valued at 13.57 Million USD in 2021 and will grow with a CAGR of 1.9% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

L-Valine is one of 8 kinds of essential amino acid. It works with other two kinds of high concentration amino acid (isoleucine and leucine) to improve body normal growth, repair tissue, regulate blood glucose and provide with required energy. L-Valine is an essential amino acid and, along with L-leucine and L-isoleucine, is part of the branched chain of amino acids. The body cannot manufacture L-valine, so it must be acquired via diet or supplementation. L-valine is mainly used in the production of pharmaceutical products and protected intermediates such L-valine methyl ester hydrochloride, Cbz-L-valine, Boc-L-valine. Therefore, pharmaceutical industry is its largest downstream market, which shares 74.88% of the consumption in 2015. The L-valine industry is highly competitive due to low entry barriers as the industry is less capital intensive and there is no major technology involved.
