Abstracts

The global Laboratory Equipment market was valued at 487.1 Million USD in 2021 and will grow with a CAGR of 3.84% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A laboratory equipment is, broadly speaking, a device or tool used for scientific purposes, including the study of both natural phenomena and theoretical research. However, amid intense competition, general labware market movers face significant challenges as the scope of innovations is comparatively limited in this segment, says the report. The market is in great need of higher quality equipment and time-saving, autoprecision device. This is leading to manufacturing outsourcing to developing economies, it is claimed. China, so far the second largest market in Asia for lab equipment, is one of the fastest moving markets in the world, growing at around 20 percent per year.
