A rotary evaporator is a specially designed instrument for the evaporation of solvent (single-stage or straight distillation) under vacuum. The evaporator consists of a heating bath with a rotating flask, in which the liquid is distributed as a thin film over the hot wall surfaces and can evaporate easily. The evaporation rate is regulated by the heating bath temperature, the size of flask, the pressure of distillation and the speed of rotation. In the coming years there is an increasing demand for Laboratory Rotary Evaporator in the regions of United States and Europe that is expected to drive the market for more advanced Laboratory Rotary Evaporator. Growth in government budgets in the principal countries, increasing of power generation fields expenditures, more-intense competition, launches in introducing new products, retrofitting and renovation of old technology, increasing adoption of Laboratory Rotary Evaporator will drive growth in Asia-Pacific markets.
