The global LABSA market was valued at 34.08 Million USD in 2021 and will grow with a CAGR of 2.85% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Linear Alkyl Benzene Sulphonic Acid (LABSA) is an anionic surfactants with molecules characterized by a hydrophobic and a hydrophilic group. They are nonvolatile compounds produced by sulfonation. Linear alkyl benzene sulfonic acid are complex mixtures of homologues of different alkyl chain lengths (C10 to C13 or C14) and phenyl positional isomers of 2 to 5-phenyl in proportions dictated by the starting materials and reaction conditions, each containing an aromatic ring sulfonated at the para position and attached to a linear alkyl chain at any position with the exception of terminal one (1-phenyl). The properties of linear alkyl benzene sulfonic differ in physical and chemical properties according to the alkyl chain length, resulting in formulations for various applications. LABSA has mainly two types, which include LABSA 96% and LABSA 90%. With washing function of LABSA, the downstream application industries will need more LABSA products. So, LABSA has a huge market potential in the future. Manufacturers engaged in the industry are trying to produce high purity and good performance LABSA through improving technology.
