Laminating film is composed of polyester and adhesives to produce a smooth and clear lamination. The film needs gluing and rewinding before compositing with prints in the manufacturing process. It can be used for whitewashing and protecting object by sticking on the surface directly. First, Laminating Film is a kind of environment-friendly coated materials which can be used for industrial printing, commercial printing and special purpose application. With the development of economy, laminating film has huge market potential in the future. Second, BOPP thin film, BOPET thin film, BOPA thin film, EVA hot melt adhesive and LDPE hot melt adhesive are the main raw materials for the production of Laminating Film. With the development of Laminating Film, raw materials` manufacturers are also benefited from the Laminating Film industry in some extent. Third, the manufacturers are concentrated in North America, Europe, Asia, China. COSMO is the largest manufacturer in the global and the laminating film industry develops fast in China. All manufactures in the world are committed to the improvement of product. In recent two years, some Chinese manufactures can almost catch up with the world`s leading technology. But they still need to create more types of Laminating Films. Forth, this industry is affected by the economy and policy, so it`s

important to put an eye on economic indexes and leaders` prefer. Fifth, the global Laminating Film production will increase to 552079 MT in 2015, from 422107 MT in 2010, it is estimated that the global Laminating Film demand will develop with an average growth rate of about 4.5% in the coming five years. Sixth, we tend to believe this industry now is close to mature, and the consumption increasing degree will show a slow decline curve.
