Landing gear is the undercarriage of an aircraft or spacecraft, and is used in both takeoff and landing. For aircraft, the landing gear supports the craft when it is not flying, allowing it to take off, land, and taxi without damage. Wheels are typically used but skids, skis, floats or a combination of these and other elements can be deployed depending both on the surface and on whether the craft only operates vertically (VTOL) or is able to taxi along the surface. Faster aircraft usually have retractable undercarriages, which folds away during flight to reduce air resistance or drag. UTC Aerospace Systems, Safran Landing Systems and Liebherr captured the top three revenue share spots in the Landing Gear market in 2015. UTC Aerospace Systems dominated with 25.54% revenue share, followed by Safran Landing Systems with 18.22% revenue share and Liebherr captured with 8.39% revenue share. In the next five years, the global consumption of Landing Gear will show upward tendency further, consumption is expected in 2021 will be 1887 units.
