As a minimally invasive surgery, laparoscopic surgery can avoid the large incision trauma of traditional surgery by puncturing surgical instruments on the abdominal cavity of patients, but the traditional medical experiment and teaching are difficult to simulate the real scene. Most of the existing laparoscopic surgery teaching can only be carried out with models. Laparoscopic simulator is a minimally invasive surgical simulation training tool, suitable for teaching and medical professionals. Laparoscopic training simulators are tools that can be used in training scenarios for laparoscopic surgery because they demonstrate almost all major abdominal procedures. Using the simulator of laparoscopic surgery, learners can be familiar with the operation method. Global Laparoscopy Simulator key players include VirtaMed, 3-Dmed, Applied Medical, Adam Rouilly, etc. Global top four manufacturers hold a share over 35%. North America is the largest market, with a share about 45%, followed by Asia-Pacific and Europe, both have a share about 50 percent. In terms of product, Mobile Laparoscopy Simulator is the largest segment, with a share over 60%. And in terms of application, the largest application is Hospital, followed by Academic Research Institution.
