The global Laser Doppler Vibrometer market was valued at 22.65 Million USD in 2021 and will grow with a CAGR of .53% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A laser Doppler vibrometer (LDV) is a scientific instrument that is used to make non-contact vibration measurements of a surface. The laser beam from the LDV is directed at the surface of interest, and the vibration amplitude and frequency are extracted from the Doppler shift of the reflected laser beam frequency due to the motion of the surface. The output of an LDV is generally a continuous analog voltage that is directly proportional to the target velocity component along the direction of the laser beam. Europe ranks the top in terms of market size of Laser Doppler Vibrometer globally, it consists of 32.74% of the international market in 2016. North America comes the second, with 27.62% of the global market. Japan and China together consists of 29.97% of the global Laser Doppler Vibrometer market in the same year.
