The global Laser Interferometer market was valued at 12.91 Million USD in 2021 and will grow with a CAGR of 1.74% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Laser interferometer is a system which uses laser as a source of light because of the high intrinsic brilliance and monochromaticity of laser lights. These systems offer the advantages of nano scale and long distance measurements. Laser interferometers also offer the combination of precise resolution and accuracy which makes it applicable for flat panel inspection, wafer steppers and nano scale micromachining. They were developed for meeting the growing demands of high precision displacement calibration in the automotive and semiconductor industries. However, the precision of these interferometer changes with the way they are used and time. Therefore, they are prone to errors if they are not calibrated on a regular basis. Laser Interferometer industry concentration is very high, manufacturers are mostly in the North America, Europe and APAC. As for the sales market, Europe output accounted for more than 33.86% of the total output of global Laser Interferometer market in 2016. Renishaw is the world leading manufacturer in global Laser Interferometer market with the market share of 66.49%, in terms of sales, followed by Agilent(Keysight), Optodyne, API and JENAer. With the increasing in production capacity, expected that the Laser Interferometer raw material price will be stable in the short term. However, the improvement of energy,

transportation costs, and labor costs, will play a significant role in promoting the cost of Laser Interferometer.
