The global Laser Marking Equipment market was valued at 2373.25 Million USD in 2021 and will grow with a CAGR of 4.81% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Laser marking is a methods to leave marks on an object, which also includes color change due to chemical/molecular alteration, charring, foaming, melting, ablation, and more. The technique does not involve the use of inks, nor does it involve tool bits which contact the engraving surface and wear out, giving it an advantage over alternative engraving or marking technologies where inks or bit heads have to be replaced regularly. Laser marking is typically used for processes such as applying labels with bar codes, date codes, QR codes, serial numbers, part numbers or adding copyright / trademarks and logos to a number of different surfaces in many industries. Another popular use is the addition of a date value being added to materials such as metals and plastics; this could be used as a best before date or maintenance due date, etc. Additionally laser marking is useful in the creation of ID and smartcards offering high degrees of fraud prevention. Laser marking offers advantages over other marking methods of mark durability, lower use of consumables, repeatability and reductions in process times. Laser marking is extremely popular in the manufacturing industry and is widely integrated into sub-processes across the production line.
