A laser rangefinder is a rangefinder which uses a laser beam to determine the distance to an object, which has been in use as early as the introduction of lasers; it is a useful optical method for measuring distance. LRF is based on time-of-flight method, and it employs light waves. This technique is based on a transmission of a short pulse of electromagnetic radiation and the reception of back scattered signals from a target. The precision of the instrument is determined by the rise or fall time of the laser pulse and the speed of the receiver. One that uses very sharp laser pulses and has a very fast detector can range an object to within a few millimetres. There are mainly two type product of Laser Rangefinder market: Telescope Laser Rangefinder and Hand-held Laser Rangefinder. In 2019, Telescope Laser Rangefinder accounted for a major share of 93% the global Laser Rangefinder market. Geographically, the global Laser Rangefinder sales market has been segmented into North America, Europe, Asia-Pacific, South America and Middle East & Africa. The North America held the largest share in the global market, its revenue of global market exceeds 39% % in 2019. The next is Europe.
