Laser Treatment Devices of Varicose Veins is an alternative to surgical stripping. It closes the vein permanently by delivering the laser energy inside the vein (rather than fishing the vein and tearing it away from its side branches like stripping does). Removing or closing the saphenous veins is not a problem in itself because only 10% of the venous flow from the limbs goes through the superficial veins; the remaining 90% goes through the deep veins. In the last several years, global laser treatment devices of varicose veins industry got a large development. In 2015, the global capacity of laser treatment devices of varicose veins is nearly 24000 units and the actual production is more than 17000 units.
